Interventional Pulmonology

Synopsis

This practical step-by-step guide outlines diagnostic and therapeutic procedures using bronchoscopic and thoracoscopic techniques. This book is the first to combine both of these endoscopic interventional procedures within a single cover. Emphasis is given to indications, contraindications, safe management and practical use in the diagnosis and treatment of a variety of pulmonary disorders. Extensive line art illustrates various procedures and the book also includes bronchoscopy and thoracoscopic views in both color and black and white.

Book Information

Hardcover: 400 pages

Publisher: Mcgraw-Hill (Tx); First Edition edition (November 6, 1998)

Language: English

ISBN-10: 0070052077

ISBN-13: 978-0070052079

Product Dimensions: 1 x 9 x 11.5 inches

Shipping Weight: 1.6 pounds

Average Customer Review: 5.0 out of 5 stars 1 customer review

Best Sellers Rank: #4,664,476 in Books (See Top 100 in Books) #76 in [Books > Medical Books > Medicine > Medical Procedure](#) #856 in [Books > Textbooks > Medicine & Health Sciences > Medicine > Clinical > Pulmonary & Thoracic Medicine](#) #1362 in [Books > Medical Books > Medicine > Internal Medicine > Pulmonary](#)

Customer Reviews

This book is the only fundamental manual dedicated to a specific theme: minor invasive endoscopic treatment of tracheobronchial lesions of various kinds. The importance of intraluminal endoscopic surgery grows during the recent years together with the general shift of surgery towards minimization of invasiveness. Nevertheless, modern medical literature still lacks prominent manuals and guidelines in interventional tracheobronchology, and both thoracic surgeons and pulmonologists have to seek for information mainly in periodical publications. Being a general thoracic surgeon who faced the necessity of learning interventional intraorganic endoscopic techniques, I myself had to limit my studying to training under guidance of prominent specialists and brief journal articles, so this book appeared to be of major value first of all for my practical work. A historical review of therapeutic endoscopy in major airway lesions is of undoubted interest and presents the impression of fundamental authors' approach from the very first pages. The first division

of the book, "Therapeutic Bronchoscopy", covers all the interventional techniques having been used so far for intraluminal surgery of major airways, including mechanical methods, high-frequency electric surgery, high-power laser surgery, cryosurgery, brachytherapy, and all kinds of airway stenting. Such a wide range of thorough review, at the best of my knowledge, hasn't yet been performed in any other manual. Each chapter, after a detailed review of various kinds of techniques to use this or that method, is completed by a "How I Do It" section where the authors present a very descriptive characteristic of their own preferred "know-how"
