Grade Level: 1 - 5

Customer Reviews

Earth's crust contains many different kinds of rocks and minerals, such as granite, sandstone, basalt, quartz, and crystal. No matter where you walk, you can find rocks and minerals. They give us clues to what happened millions and millions of years ago in Earth's history. With fascinating facts and beautiful full-color photographs, award-winning science writer Seymour Simon takes young readers into the wonderful world of rocks and minerals.

Seymour Simon has been called "the dean of the [children's science book] field" by the New York Times. He has written more than 300 books for young readers and has received the American Association for the Advancement of Science/Subaru Lifetime Achievement Award for his lasting contribution to children's science literature, the Science

Books & Films Key Award for Excellence in Science Books, the Empire State Award for excellence in literature for young people, and the Educational Paperback Association Jeremiah Ludington Award. He and his wife, Liz, live in Columbia County in Upstate New York. You can visit him online at www.seymoursimon.com, where students can post on the "Seymour Science Blog" and educators can download a free four-page teacher guide to accompany this book, putting it in context with Common Core objectives. Join the growing legion of @seymoursimon fans on Twitter!
